

Domain Objects

```
<hibernate-mapping>
  <class name="Person">
    ...
  </class>
</hibernate-mapping>
```

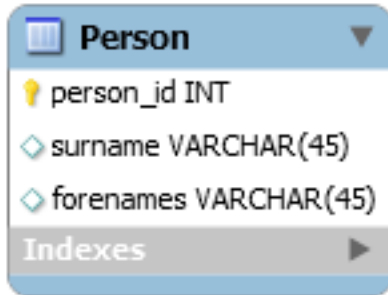

```
class Person {
    protected int personId;

    public int getPersonId() {
        return personId;
    }

    public void setPersonId(int id) {
        this.personId = id;
    }

    ...
}
```

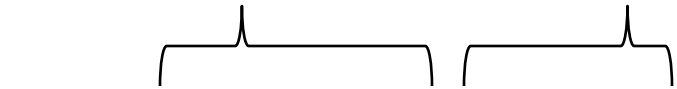

Service Objects

All of the database access code will go in the service class's methods

```
class PersonService {  
    public Person getById(int id) {  
        ...  
    }  
  
    public List<Person> getAll() {  
        ...  
    }  
  
    public void save(Person p) {  
        ...  
    }  
  
    public void delete(Person p) {  
        ...  
    }  
  
    ...  
}
```
